A showcase of new products, ideas and manufacturer news.

The MILKchiller from Frieling offers the convenience of cooling and serving dairy products in one compact unit. The portable unit keeps milk cold at a safe serving temperature, even outdoors in the heat. It holds a standard half-gallon carton or plastic container or a MILKchiller reusable container, keeping the temperature compliant with food safety standards. There is no contact between the unit and the milk inside, so contamination is virtually impossible. For more information, visit MILKchiller@Frieling.com.
