

TAKE A CHILL PILL ▶

Frieling has announced enhancements for its **Milk Chiller**, which both cools and serves dairy products in one unit, with exact portion control. The Milk Chiller is designed to eliminate clutter and waste at coffee conditioning stations. It holds a half-gallon carton or plastic container, keeping the temperature compliant with industry safety standards and eliminating the need for constant temperature monitoring. Improvements on the Milk Chiller include: an LCD display window that identifies the type of milk product inside in five languages via a selector button; a temperature sensor that monitors and maintains temperature; an enhanced electric air pump mechanism that eliminates repetitive manual pumping and accommodates one-handed operation; and a removable HEPA filter as a safeguard against dust entering the unit. The item will be available in spring 2007 for an approximate list price of \$350. 1920 Center Park Drive, Charlotte, NC 28217; 800/827-2582. frieling.com
